

# CoreBanking Implementation Program

## Objectives

-  **Coreless Banking**  
The Core Banking Implementation must give freedom to Products and Channels in order to evolve in OpenFinance / NeoBanking Scenarios.
-  **Transparent Digital Evolution**  
The organization can evolve it's digital strategy without the New Core Banking being and impediment or condition to delay the evolution.
-  **Domain Driven Architecture**  
The Core Banking Implementation must follow the "Composable" model instead of "Core Centric" model following new Core Banking System Best Practices.

## How do we achieve it ?

-  Using the "Coreless Banking" concept applied by BIAN with more than 300 institutions already implementing worldwide.
-  Incorporating and merging Open Group "Composable Architectures" concept with BIAN Service Domains
-  Applying OpenGroup' Decoupling methodology to CORE Banking implementation models
