MASTER DATA MANAGEMENT IMPLEMENTATION

ABOUT THE PROGRAM

With this program you can design and implement an operational customer and product data management based on OpenFinance and NeoBanking semantics, preparing the organization for new modern operational banking scenarios and . aligning the data with NeoBanking echosystem

OUR
SERVICES

Decoupled
Generating a data repository based on decoupled entities based on BIAN.

Standardized
Creating an integration layer fully based on ISO20022 / BIAN standards and API Led Connectivity.

Aligned
MDM totally aligned in semantics and communication with OpenFinance community.

KEY
ADVANTAGES

A 4th generation Master Data Management must me semantic aligned with future OpenFinance / NeoBanking languages, also the way to communicate with it.

Using the BIAN BOM Model together with BIAN Semantic APIs you get this standardization, also avoiding to fail in terms of MDM definition and design.
