

OPENFINANCE

PRODUCT

TRANSFORMATION

KEY OBJECTIVES

Composable Product

The product can work in a "domain driven" architecture where can exchange domains in different scenarios.

Decoupled Product

The product can work independently from the "core systems" and from the institution channels, giving it complete independency from the organization.

Standardized Product

The product is based on OpenFinance and NeoBanking standards giving the business capabilities to move in those new scenarios.

MAJOR BENEFITS

Transform your current financial products with capabilities to work in OpenBanking / OpenFinance and NeoBanking scenarios.

Evolve the IT architecture that support the products in a progressive way, giving business capabilities and improvements in a short term perspective.

ABOUT THE PROGRAM

With this program you can modernize your product catalog in order to work en Digital / OpenBanking / OpenFiance and NeoBanking scenarios.

Also you are transforming proggresively from a monolithic architecture to a IT Composable Architecture
